

Safe Infusion Therapy Excellence (S.I.T.E.) CVC Care Standard Workshop 2024

Central Venous Catheters (CVCs) are frequently used in Critical Care Units, Hemodialysis Units, and Oncology Units for treatment administration and hemodynamic monitoring. However, the presence of indwelling CVCs increases the risk of complications which are responsible for significant morbidity and mortality, as well as additional costs. These adverse events can be avoided in the great majority of cases.

Healthcare improvement programs and quality improvement strategies have been shown to be effective to prevent complications.

Through Safe Infusion Therapy Excellence (S.I.T.E), we would like to share with you the recommended standards to reduce these risks together.

This workshop focuses on care bundle/standard guidelines and provide practical sessions to strengthen participants' knowledge & skills in pre-competency development.

23 November 2024 | Petaling Jaya, Malaysia

Learning Objectives:

- To increase awareness of the inherent risks
- To improve care continuum and patient safety by optimizing systems and processes
- To propel sustainable learning and competency development

Workshop Framework:

- MSQH Standard
- National/International Guidelines
- Presentations
- Practical/Hands-on Sessions
- Assessment/Test

Venue
